

Legend and General Description – EID Project 184 Access Roads

Overview: The EID Project 184 Access Road Maps have been prepared to delineate the roads used in accessing project facilities and for conducting project-related activities including recreation. In general, various state highways and county roads have not been included. Rather, the road systems listed are for the most part, those occurring on federal lands managed by the USFS, and private lands owned by EID and other property owners where EID has easements for such use. The maps have been prepared for areas similar to other project exhibit maps supporting the Project 184 Relicensing in order to maintain consistency with recognized landmarks and project features.

The data compiled characterizing the roads is described as follows:

P184 ID – EID’s designation of road segments, divided by lengths between intersections with other roads, and distinguished by type of surfacing;

USFS ROUTE NO. – Where available, the corresponding USFS Route Number was included for roads on USFS managed lands;

NAME – The common name for the road as known by the County, USFS or EID project personnel;

SURFACE TYPE – The type of surface on the road, characterized as either dirt, rock or paved;

EID USE LEVEL – A numbering system to depict purpose and frequency of use for project-related access purposes, described as follows:

- 1 – Daily Operating and Maintenance use by light vehicles;
- 2 – Weekly Operating and Maintenance use by light vehicles;
- 3 – Monthly Operating and Maintenance use by light vehicles;
- 4 – Periodic Maintenance or Construction use by heavier vehicles & equipment;
- 5 – Recreation use associated with EID’s project recreation facilities;
- S – Designates Summer Use;
- W – Designates Winter Use

DESTINATION – The project facility that is typically accessed by use of the road;
